

CR SERIES

CAST IRON PISTON COMPRESSORS

Atlas Copco

CR Contractor Series

The Contractor Series includes smaller units ranging from 2 - 14 hp and is the most economical tier in the CR series. The low-profile cast iron design, semi-pneumatic wheel, heavy-gauge wire belt guard, and rugged pump design provides an ideal solution for small, portable applications. It has electric or gas-powered options, which makes this series perfect for contractors, service trucks, construction sites, automotive shops, and light manufacturing applications.

CR Professional Series

The Professional Series is the second tier of the CR compressors, ranging from 5 - 20 hp. These heavy-duty units are either electric or gas-driven and come equipped with a range of options not available in the Contractor Series, including: electric drain, aftercooler, TEFC motor, NEMA4 control panel, and a pressure-lubricated pump.

CR Industrial Series

The Industrial Series has all of the bells and whistles you could want, available from 5 - 20 hp. Each unit comes equipped with an electronic drain, belt guard aftercooler, and low-oil-level switch as standard. These are electric units and the 10 hp and 15 hp units also come standard with head unloaders. The TN4 configurations also come with a TEFC motor and NEMA4 control panels.
